

Live Training

nJAMS Developer

The Integration Matters training approach means that we tailor learning to suit the specific needs of your business and organization. Our live trainings and workshops provide an efficient way to deliver in-depth knowledge to specific roles within your IT team.

nJAMS Developer - SDK Training

nJAMS provides out-of-the-box monitoring capabilities for numerous integration platforms, enterprise applications, as well as cloud services. We continually extend the list of supported systems and offer in addition the nJAMS SDK to collect and monitor data of custom applications.

During the nJAMS SDK Training attendees are systematically educated on the design, features and capabilities of the nJAMS SDK. This class provides crucial insights into the development of efficient, well-considered clients for monitoring an application. The training uses examples and scenarios to show best practices for nJAMS client development and highlights the various options on how to best connect your application with nJAMS server.

After attending this course, attendees should be able to access nJAMS developer resources and extend connectivity of their process monitoring solution.

Topics Covered

- nJAMS Fundamentals
- Overview of nJAMS SDK
- Explore the nJAMS SDK JAVA API
- How to create a project messages
- How to create nJAMS events
