

Integration Matters Security Update: December 10, 2017 - nJAMS Server 3 - 2017-16789

Cross-site scripting (XSS) vulnerability in Integration Matters nJAMS 3

Original release date: December 10, 2017

Source: MITRE

Last revised: --

[CVE-2017-16789](#)

Systems Affected

- nJAMS Server 3.2.0 and below

Description

Cross-site scripting (XSS) vulnerability in Integration Matters nJAMS 3 allows remote authenticated administrators to inject arbitrary web script or HTML via the users management panel of the web interface.

Solution

Integration Matters has released a hotfix in June 2017 as part of the regular nJAMS product maintenance which addresses this issue.

For each affected system, apply the latest security update to nJAMS Server 3 for the most complete protection:

- nJAMS Server 3.2.0 and below,
apply "Hotfix 7 for nJAMS Server 3.2.0" or higher

Check the Integration Matters support portal for a complete list and details of all software updates.

"nJAMS Server 4" was never affected by this security issue.
