

# BUSINESS-FOCUSED MONITORING FOR BW6 APPLICATIONS

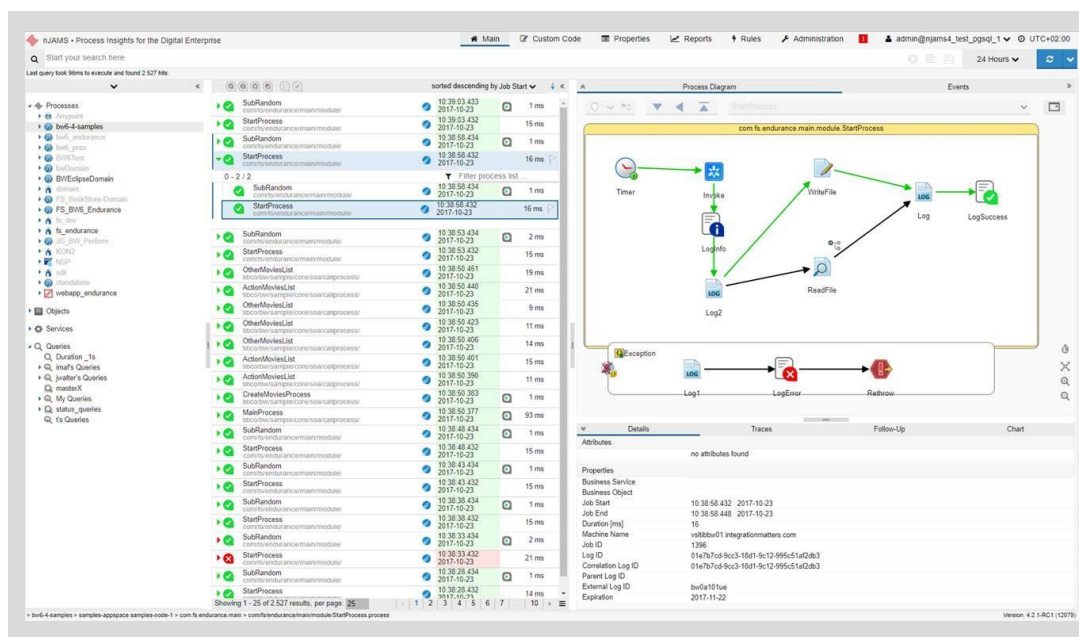

Business performance is the only thing that really matters when monitoring IT activities. Use nJAMS to develop a business-oriented, top-down monitoring approach and identify ways to improve your overall process development and operations.

## Begin with the End in Mind.

Deployed by thousands of customers worldwide, TIBCO ActiveMatrix BusinessWorks™ is an integration platform for mission-critical IT environments. Powered by a next-generation foundation that includes an Eclipse-based design-time, powerful process engine, and a modular OSGI-based run-time, BW6 enables developers to create new services, orchestrate business processes and integrate applications in the shortest time possible.

With the advent of agile infrastructure and growing stakeholder groups across IT and operations, there's a strong need to drive insights and greater visibility into all business processes. nJAMS provides just that, out-of-the box. It supports CI/CD development practices and simplifies the process of issue resolution through automated alerts and complete context information. nJAMS enables you to look beyond operational efficiency and focus on customer and business value.

## Get Results Quickly.

The screenshot displays the nJAMS interface with a search bar at the top. On the left, there is a navigation tree with categories like Processes, Objects, and Services. The main area shows a list of process instances, sorted by job start time, with columns for process name, start time, and duration. On the right, a process diagram is visible, showing a flow from a Timer to an Invoke activity, which then branches into Log1, Log2, and ReadFile. Log1 leads to LogError, which then leads to a Retry activity. Log2 leads to LogSuccess. The diagram also shows an Exception path leading to LogError and then to a Retry activity.

100 % visibility over end-to-end processes and context data for IT and business

Issue resolution time reduced by up to 90%

Maintenance and support costs lowered by 20 % on average

Saves time during implementation and test of new products by 5-10 %

# nJAMS Client for BW6

The nJAMS Client™ for BW6 enables TIBCO ActiveMatrix BusinessWorks™ 6 engines to connect with nJAMS Server4™ for business process monitoring. The solution consists of two parts:

- **nJAMS Server4™** running in a web application container and
- **nJAMS Client™** for BW6 (a TIBCO ActiveMatrix BusinessWorks™ 6 Plugin) running within the same JVM hosting TIBCO ActiveMatrix BusinessWorks™ 6.

Integration Matters is a longstanding TIBCO partner. Initially, nJAMS was built specifically for TIBCO environments. The goal was to provide a non-invasive, out-of-the-box TIBCO BW monitoring solution. It should require no process design changes, not affect the BW engine's performance while monitoring, and be easy-to-manage.

Today, nJAMS offers extended monitoring functionality covering multiple integration platforms, enterprise applications and cloud services.

nJAMS Client™ for BW6 not only fully supports TIBCO ActiveMatrix BusinessWorks™ Version 6.4, but also includes nJAMS palette activities in TIBCO Business Studio™ and supports the nJAMS Plugin for Replay.

## Features:

- Monitors TIBCO ActiveMatrix BusinessWorks™ 6
- Visualizes BW process diagram and execution path
- Sends monitoring events and business context information to nJAMS Server4™
- Starts escalation procedures to resolve problems
- Automatic correlation of processes

## Product Portfolio

nJAMS Server4™  
nJAMS Client™ for BW  
nJAMS Client™ for BW6  
nJAMS Client™ for Mule  
nJAMS Plugin for Replay  
nJAMS Client™ for SAP  
nJAMS Client™ for Application Server  
nJAMS Client™ SDK  
Excel Plugin for BW  
Exchange Plugin for BW
