

nJAMS PROVIDES PROCESS INSIGHTS FOR OPERATIONAL EXCELLENCE AND FASTER TIME-TO-MARKET.

nJAMS is not Just Another Monitoring Solution. It is a unique process visibility suite which spans multiple integration platforms, enterprise applications and cloud services.

nJAMS provides process insights out-of-the box, supports implementation and test of new products and simplifies the issue resolution process through automated alerts and complete context information.

nJAMS helps IT managers to achieve their goals. Create your goals with measurable metrics and track your business processes constantly from design stages to deployment. Live dashboards help the entire team to maintain focus.

Features:

- **Powerful search**
Search for any information that you need about the execution of your business processes - across integration platforms, applications and cloud services. A powerful query language is available for any sort of query.
- **Comprehensive presentation**
nJAMS is easy to use and incredibly fast. All you need is a Chrome browser, plugins or applets are not required. nJAMS Server4 is available on-premise and as cloud service.
- **Alerting engine**
Define rule based actions for specific events to trigger notifications in case of any alert. Alerts can be generated for any deviation from your internal and external SLAs.
- **Extracts**
Extracts allow you to declare nJAMS log events at any place in your process definition during runtime. You can easily extract essential information of any process step wherever you need transparency.
- **Process performance reports**
Standard dashboards show the availability, response time and throughput of business processes for a certain period of time. Create your own custom dashboards for example with the embedded highcharts library.
- **Ready to use right out-of-the-box**
Add nJAMS to your existing services without any migration effort. Just attach nJAMS to your business process applications and it works! To benefit from the full power of nJAMS extend your processes with explicit nJAMS activities.
- **Fully decoupled**
nJAMS is fully decoupled from the underlying business processes by using your preferred messaging platform or gateway. That means the business process is not affected while nJAMS is maintained, for example. Collected log data in the meanwhile will be processed by nJAMS right after end of maintenance.
- **Inherent authentication / authorization**
nJAMS is based on a secure user/role concept. Grant permissions to specific users/roles on any nJAMS object and report. Only authenticated and authorized users have access to nJAMS and log data or reports.

Product Portfolio

nJAMS Server4™
nJAMS Client™ for BW
nJAMS Client™ for BW6
nJAMS Client™ for Mule
nJAMS Plugin for Replay
